

BioManager Guest Account

BioManager provides a free guest account for individuals to trial the BioManager application before purchasing a subscription. The guest account is for evaluation purposes only and may not be used for research or teaching purposes.

To login as a Guest, use the login password combination: guest/guest (as below). You will need to accept any security certificate that comes up in order to get to the workbench.

The screenshot shows the BioManager login interface. At the top left is the BioManager logo. Below it are two input fields: 'Login:' with the text 'guest' and 'Password:' with masked characters. A 'Log in >>' button is positioned below the password field. Underneath the button, it states 'Log in mode is Standard (Switch to Secure)'. At the bottom of the form area, there is a link that says 'What is BioManager?'.

Guest accounts have access to the same bioinformatic programs as Subscription accounts with the following exceptions;

- Guest accounts are unable to Download data, Share or Import files from other accounts.
- Guest accounts are purged of all data at 1am Eastern Standard Time (Sydney time). At that time all jobs that are running will also be stopped.
 - To assist guests from outside of Australia, the amount of time remaining before the next purge is indicated when you log in.
- The Guest account may be servicing up to 20 people at the same time, so run times will be much slower than with the research accounts
- Only 3 jobs can be run at any time with the Guest account. If others are trialling the system at the same time, you may have to wait for the jobs of others to complete before starting your own.
- You will need to be particularly aware of where the results are being saved if there are other people using the guest account at the same time.
- Be aware that all files and folders are viewable by all other users of the Guest account.

For information about subscriptions to BioManager, please contact sonia@sydneybioinformatics.org
